DOI Business and IT Communities Working Together

Delivering Desktop PCs, Laptops, File Servers, Printers, Monitors, and Consumables

Interoperability, Cost Effective, Technical Standards

Vision: The DOI aims to promote technical standardization and cost-efficiency by procuring IT products and services across-the-organization that are consistent with enterprise architecture and IT security guidelines.

Strategy: DOI will achieve this by: 1) coordinating and consolidating the acquisition and management of IT hardware and software products via enterprise-wide agreements; 2) ensuring that acquired IT products and services comply with the standards and specification outlined in the Department's Technical Reference Manual; and 3) providing marketing and outreach to DOI users to ensure that they can quickly and easily obtain the products that they need off the established contracting vehicles.

Benefits: Achieves standardization and \$ savings.

Ready To Order: Use the hyper-link at the bottom of each page..

Introduction

For nearly three years, the Department of the Interior (DOI) has had in place an enterprise-wide Blanket Purchase Agreement (BPA) for all employees to take advantage of purchasing the latest hardware equipment – desktop PCs, laptops, file servers, monitors, and printers – to accomplish their jobs. This BPA was established to be consistent with the existing enterprise architecture, technical standards, and IT security requirements – all at reduced costs.

Last September, under the direction of the Chief Information Officer, the Department competitively renewed and expanded the existing BPA to include a wide array of consumables – magnetic media such as tape cartridges, CDR/DVD, flash/jump drives; peripherals and accessories such as toner cartridges, smart card readers, Zip drives, and laptop carrying cases – in addition to availing ourselves of the most up-to-date technology and wide variety for desktops (3); laptops (3 ruggedized models; 5 non-ruggedized models); file servers (5 flavors); printers (8 models); and various choices of monitors – all from several of the leading hardware vendors.

“The new BPA contracts are mandatory-for-use within all the DOI bureaus and offices to purchase servers, desktops, laptops,

monitors, and printers. The new BPA contracts are optional for all consumable purchases.”

These established contracts were specifically designed to capture at least 85 - 90% of DOI's technical requirements, taking into account that some bureaus and office hardware requirements may fall outside this range. In these particular instances, DOI bureaus and offices may choose to utilize the existing waiver process described in the DOI's Technical Reference Model (<http://www.doi.gov/ocio/erm/trms.html>) to purchase hardware outside the BPA.

Additional details pertaining to the new hardware contracts, including the award contact information and the corresponding contract numbers for the specified consumables, can be obtained at <http://www.doi.gov/ocio/erm/hardware.html>.

Each hardware vendor is required to automate their ordering process to establish an on-line ordering system so that DOI employees can obtain the hardware products and commodities that they need as quickly and efficiently as possible. In the meantime, the designated DOI bureau and office Points of Contact ([see page 15](#)) may contact the specific vendors and place orders manually as well as answer questions you may have.

Product Summary

Desktops

DOI employees have the choice of three different types of desktops from Dell to meet their mission needs:

Office Automation Models, are excellent for users running office productivity applications such as e-mail, word processing, spreadsheets, internet applications, Power Point presentations, accessing PDF documents and graphic images. They may also be used for viewing topographic maps and 3D figures. Available in desktop or mini tower chassis.

Power User/GIS Models, that are designed for users that need all the capabilities of the Office Automation Desktop and also require the ability to perform functions such as light to medium simulation or scientific modeling. In addition, this unit will perform well for advanced graphics. This will be a low end choice for those needing to work with leading-edge advanced graphics. Available in desktop or mini tower chassis.

Total GIS Models, that support Geographic Information Systems (GIS) are designed for the user that requires plenty of computing power to handle the high end applications and advanced graphics required by GIS applications. These models are intended to be used by our scientific and engineering communities that demand the most processing power offered in a desktop PC. These units are configured with dual processors with expandable options to meet the most demanding needs.

Laptops

DOI employees can take advantage of 5 non-ruggedized laptops from leading vendors such as Gateway, Dell, NCS, and Panasonic as well as 3 ruggedized models from Panasonic and Transource that conform to MIL-STD-810F.

Telecommuter Models, are designed to provide mobility, a large 15 inch display, good graphics, and value. This model emphasizes manageability and compatibility and is ideal for standardized deployments. It is excellent for running software application such as Word Processing, E-mail, surfing the Web, digital media for training purposes, interactive applications, accessing databases, and creating Spreadsheets and Presentations. The DOI BPA has two versions of this model. The telecommuter standard is equipped with a traditional 15 inch display while the telecommuter widescreen has a 15.4 inch display in the new and popular widescreen format.

Traveler Models, for those employees often on the move, using a notebook in the office, on the road, and in different rooms at work or home. It is designed to provide you mobility in a convertible package. It can be used as a standard notebook or as a tablet PC. This model is great for routine information processing tasks including word processing, email, accessing data bases and applications systems.

Native Serial Port Models, provides an integrated native serial port to support legacy applications and incorporates features of standard notebook. It is good for running typical office automation tasks. This system is considered by many industry observers to be a good semi-rugged system.

GIS Models, are intended to be the most powerful models for processing graphics-laden applications.

Ruggedized and Mobile Models

All of these units are suitable for DOI employees that must work in outdoor, field, or industrial-strength harsh environments.

Ruggedized Convertible Tablet, can be used as a standard notebook or as a tablet PC and converts back and forth as required. This model is great for routine information processing tasks including word processing, email, accessing data bases and applications systems. This system is available as either convertible notebook PC with touch screen and a serial port or handwriting-friendly tablet PC without a serial port.

Ruggedized Slate Tablet, designed for field use with applications which require a slate form factor. A keyboard and mouse is not normally used in the field as most input is via stylus. A serial port is included on this system. This model can be used for routine information processing tasks including word processing, email, accessing data bases and applications systems when properly equipped (with a keyboard, mouse, standard monitor, etc.). A serial port is included on this system.

Ruggedized Native Serial Port, is a ruggedized computer in a traditional notebook package that includes a native serial port. This model is good for routine information processing tasks including word processing, email, accessing data bases and applications systems. A serial port is included on this system.

Monitors

A range of 19", 21", and 24" monitors are available.

Printers

DOI employees have a choice of a wide-range of printers from several leading vendors to meet individual and workgroup capabilities. The DOI BPA has a host of individual travel, laser, and multifunction printers as well as medium/large workgroup multifunction and color models available.

Consumables

A wide-range of commodities to choose from such as: toner cartridges, thumb drives, mice, keyboards, surge protectors, data cartridges carrying cases, etc. from leading manufacturers.

Desktop Comparison

Office Automation

Dell Optiplex 620

• Processor

Intel Pentium 4 with HT (3.0GHz, 2M, 800MHz FSB).

• Graphics

PCIe 128MB ATI Radeon X600SE.

• Memory

1 GB DDR2 533MHz (2 DIMM).

• Storage

80 GB SATA 3.0Gb/s and 8MB DataBurst Cache

• Monitor

Available as extra cost item — Dell 19"

• Options

Processor, Memory, keyboards, speakers, removable storage, installation, gold tech support, keep your hard drive, etc.

• Base Price

\$698.00

Power User/GIS

Dell Optiplex 620

• Processor

Intel Pent. 4 with HT (3.2GHz, 2M, 800MHz FSB). Opt. Dual Core

• Graphics

PCIe 128MB ATI Radeon X600SE.

• Memory

1 GB DDR2 533MHz (2 DIMM).

• Storage

160GB SATA 3.0Gb/s and 8MB DataBurst Cache

• Monitor

Available as extra cost item — Dell 19"

• Options

Processor, memory, keyboards, speakers, removable storage, installation, gold tech support, keep your hard drive, etc.

• Base Price

\$728.30

Total GIS

Dell Precision 690

• Processor

Dual Core Intel Xeon (3.0GHz, 2X, 2M Cache.

• Graphics

PCIe 256MB x16 nVidia Quadro FX 3450.

• Memory

1 GB DDR2 533MHz ECC (2 DIMM).

• Storage

160GB SATA 3.0Gb/s, 7200 RPM Hard Drive with 8MB DataBurst Cache

• Monitor

Available as extra cost item — Dell 19"

• Options

Processor, memory, keyboards, speakers, removable storage, installation, gold tech support, keep your hard drive, etc.

• Base Price

\$1,526.00

**** Note:** It is more cost effective to purchase the Power/GIS for an additional \$30 then upgrading the Office Automation model.

File Server & Consumables Info.

File Servers

**Blade****Backup, Small,
Medium****Large**

A selection from five high-end, robust Windows file servers from IBM are offered on the new DOI Hardware BPA. For technical specifications and customization options, please see

<http://www.doi.gov/ocio/erm/servers.html>

Online ordering system is available at

<http://www.pc.ibm.com/us/offers/doi.html>

Consumables

A host of magnetic media, such as CDR/DVD, Flash Drives, Optical disks, and Tape Cartridges are available for purchase. In addition, peripherals and accessories, such as keyboards, smart card readers, mice, and laptop carrying cases are also available on the new DOI Hardware BPA. For specifications of these and other available products, please see

<http://www.doi.gov/ocio/erm/commodities.html>

Online ordering system is available at

<http://doi.abmfederal.com/>

Waiver Process

Background

These established contracts were specifically designed to capture at least 85 - 90% of DOI's technical requirements, taking into account that some bureaus and office hardware requirements may fall outside this range. In these particular instances, DOI bureaus and offices may choose to utilize the existing waiver process

Procedures

The process, supported by the DOI's Chief Technology Officers (CTOs) Council, calls for the bureau Chief Information Officers (CIOs) to review waiver requests for hardware purchases outside the mandatory-for-use BPA to support bureau-unique missions and programs, and make final decisions whether to accept or reject specific requests. These waivers must be kept on file with each bureau. For hardware deemed out of scope for the bureau, in order to support DOI-wide initiatives, the bureau CIOs need to forward the waiver requests to the DOI Chief Technology Officer who will present them to the CTO Council for final vote. Upon receiving the final vote results, the DOI CTO will make a recommendation to the DOI CIO who will have the final authority whether to reject or accept the bureau's waiver request. This process will be reexamined and modified as needed in updated versions of the DOI's Enterprise Architecture Technical Reference Model.
